**Motorised and automatic changeover switches  
from 40 to 160 A**

## Changeover switches

### Function

ATyS M is a range of single-phase or three-phase modular motorised changeover switches with positive break indication. They enable on load changeover switching of two supply sources in remote control, automatic or manual mode. They are intended for use in low voltage power systems where interruption of the load supply is acceptable during transfer.

### Advantages

#### Proven technology

Two mechanically interlocked SIRCO MV load break switches provide rapid switching, excellent dynamic withstand and a high number of operations.

#### Stable positions

The ATyS M has three stable positions which are not affected by voltage drops or vibrations, thus protecting your load against network interference.

#### Secure operation

ATyS M provide positive break indication, confirming switch position, and a back-up manual operation function.

#### Choice of configuration interface

ATyS M 6 automatic changeover switches are available with a simple or an advanced integrated configuration and control interface:

- ATyS M 6s are configured through the adjustment of dip switches and potentiometers.
- ATyS M 6e are configured through the use of pushbuttons and a display.

#### Return to position 0

Depending on its configuration, the ATyS M 6e enables a return to position 0 if the power is cut.

### Modes of operation

AUT/MAN control

Back-up manual operation

## What you need to know

### On ATyS M 3s models

#### Power supply

ATyS M 3s is equipped with two independent 230 VAC power inputs (176-288 VAC), 50/60 Hz (45/65 Hz).

These two power supplies can be connected individually one to switch I and the other to switch II:

- Power supply 101-102 must be available to reach position I
- Power supply 201-202 must be available to reach position II.

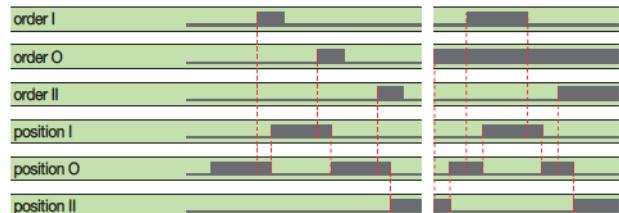

The use of a dual power supply (DPS), or an external supply module, provides full security of the 3 position commands with the availability of either supply.

In this case, both the supply inputs must be connected in parallel in order for them both to be supplied from the output of the DPS.

#### Electrical control

The positions are controlled by volt-free contacts which may come from an external automatic controller (e.g. ATyS C30) or, for example, pushbuttons. The positions are stable, even without a supply. Two types of control logic are available:

- Impulse logic
  - A switching command of at least 60 ms is necessary to initiate operation.
  - The first command (order) received (I or II) has priority as long as it remains present.
- Contactor logic
  - Order 0 must be maintained to activate contactor logic (313-317).
  - If command I or II disappears, the device returns to zero position, if power supply is available.

### ATyS M 6s and M 6e models

#### Power supply

- ATyS M 6 products are self powered from incoming supplies: 230 VAC (176-288 VAC for the ATyS M 6s and 160-305 VAC for the ATyS M 6e), 50/60 Hz (45-65 Hz).
- For three-phase, two versions are available:
  - 230 / 400 VAC with distributed neutral conductor: Product is powered between phase and neutral (if there is no neutral, an autotransformer is required)
  - 127 / 230 VAC with or without distributed neutral conductor: product is powered between 2 phases.
- For single-phase, one version is available:
  - 230 VAC networks: Product is powered between phase and neutral.
- The neutral conductor can be connected to the left or right side of each switch.

#### Configuration

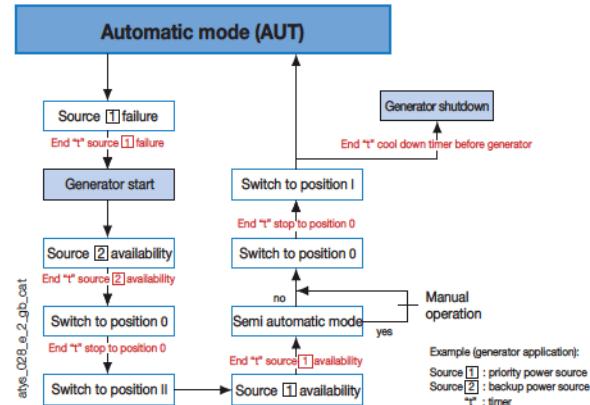

##### ATyS M 6s

- Common points between the three-phase and single-phase versions:
  - 2 potentiometers (normal supply loss and return time delays)
  - 2 dip-switches (Pause for 2 seconds in position 0 during switching I<->II; Transformer/Transformer or Transformer/Genset application).
- 4 LEDs (Source availability indicators; "AUT" Automatic mode; Fault).
- 3 inputs for external control (Inhibition of the automatic mode; Remote test on load (Priority selection for Transformer/Transformer); Manual retransfer from the alternate supply to the normal supply).
- 1 NO bi-stable output relay for generator starting/stopping.
- 1 NC relay for product availability.
- Specific to three-phase ATyS M:
  - 2 additional potentiometers (Nominal voltage; Voltage/frequency thresholds)
  - 2 additional dip switches (50 or 60 Hz; network selection)
- Specific to the single-phase ATyS M:
  - PRG button: voltage and nominal frequency auto configuration.

#### Automatic control

- ATyS M 6s and M 6e are equipped with a sequence logic.

##### ATyS M 6e

- Applications: Transformer/Genset, Transformer/Transformer, with or without priority.
- Display + keyboard (Device configuration; Displays supply measurements; Test and control mode access).
- LEDs (Product Power On; Source availability indicators; Position indication; "AUT" Automatic mode; TEST/CONTROL Mode; Fault).
- 3 configurable inputs.
- 3 configurable output relays.
- 1 configurable output relay for generator starting/stopping.
- Connection of a remote interface ATyS D10 or D20.
- RS485 MODBUS communication (COM version).

## Accessories

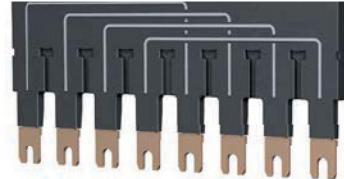

### Bridging bars

#### Use

For providing a common connection between switches I & II on the incoming or outgoing side of the ATyS M (outgoing side only for ATyS M 6), to enable, for example, the load to be supplied from either incoming source (I or II).

The bridging bar set does not reduce the connection capacity of the ATyS M's cage terminals.

### Voltage sensing and power supply tap

#### Use

This single-pole voltage sensing tap allows the connection of  $2 \times 1.5 \text{ mm}^2$  voltage sensing or power cables to any ATyS M

power terminal without reducing its connection capacity.

### Terminal shrouds

#### Use

Protection against direct contact with terminals or connecting parts.

#### Advantages of the terminal shrouds

Perforations allow remote thermographic inspection without the need to remove the shrouds. Tamper seals can be fitted for increased security.

#### Required quantity

For upstream and downstream protection with a three-phase ATyS M two sets are required. For the single-phase version only one set is required.

### Auxiliary contact

#### Use

Auxiliary contacts for position indication. A maximum of two auxiliary contact blocks can be fitted to each product. Each auxiliary contact block integrates 3 NO/NC auxiliary contacts, one per position (I, 0, II). There are two versions of contact block, one with three separate sets of connections and one that has its three common terminals linked internally. With the common points linked the number of signal cables required is

reduced (4 cables instead of 6). The ATyS M 3s is supplied as standard with one auxiliary contact block fitted; this A/C block has separate common points.

### Auto-transformer

#### Use

For use with ATyS M 6 in 400 VAC three-phase applications without a distributed neutral. As the ATyS M 6 has integrated measurement and power supply circuits, a neutral connection is required for 400 VAC three-phase applications. When no neutral connection is available this autotransformer (400/230 VAC, 400 VA) provides the 230 VAC required for the ATyS M 6 to function.

## Remote interfaces for ATyS M 6e

### Use

To display source availability and position indication on the front of a panel.

Interfaces are powered from the ATyS M 6e, via the RJ45 connection cable.

Maximum connection distance: 3 m.

### ATyS D10

To display source availability and position indication on the front panel of an enclosure.

Protection degree: IP21

### ATyS D20

In addition to the functions of the ATyS D10, the D20 displays measurements and enables ATyS M 6e mode control and configuration from the front of a panel.

Protection degree: IP21

### Door mounting

2 holes Ø 22.5.

ATyS M connection via RJ45 cable, not isolated.

Cable available as an accessory.

## Connecting cable for remote interfaces

### Use

To connect between a remote interface (type D10 or D20) and an ATyS M 6e.

### Characteristics:

RJ45 8 wire straight-through, non isolated cable. Length 3m.

## Function

**ATyS S** is a range of 4 pole motorised changeover switches with positive break indication. They enable the on load transfer of two three-phase supplies via remote volt-free contacts, from either an external automatic controller, using pulse logic, or a switch. They are intended for use in low voltage power systems where interruption of the load supply is acceptable during transfer.

## Advantages

### Extensive power supply range

The ATyS S is available in four supply versions, each with a broad range (+/-30%). The four versions are:

- 230 VAC single power supply,
- 2 x 230VAC dual power supply,
- 12 VDC power supply and
- 24/48 VDC power supply.

### Safety and reliability

ATyS S products use stable position technology, ensuring constant pressure on the contacts and preventing premature faults. In addition, they do not require a power supply to maintain position, thus protecting their loads from voltage fluctuations.

### Easy integration

ATyS S products can be easily installed inside enclosures. Their design, and in particular their compact size, enables integration within most 200 mm deep enclosures.

## Accessories

### Bridging bars

#### Use

For bridging power terminals on the top or bottom side of the switch

Rating (A)	No. of poles	Reference
40 ... 125	4 P	9509 4012

atys-s\_019\_a

### Voltage tap

#### Use

Enables the required power supply for ATyS S 230 VAC and ATyS Sd products to be tapped directly from the product's incoming power terminals. Can also be utilised in applications without neutral, to provide 400 VAC to the autotransformer.

Rating (A)	Reference
40 ... 125	9509 4001

### Terminal retainer

#### Use

These clips have a dual function:

- To prevent direct access to the power supply and control terminals and
- To secure these connector terminals.

### Autotransformer 400/230 VAC

#### Use

For applications without neutral, this autotransformer provides the 230 VAC required to power ATyS S 230 VAC and ATyS Sd products.

Rating (A)	Reference
40 ... 125	9599 4004

### DIN rail

#### Use

This 4-module DIN rail can be installed directly on the front of the ATyS S and can be utilised, for example, for the installation of a surge protection device.

Rating (A)	Reference
40 ... 125	9599 4002

### Surge protection device

#### Use

Provides transient overvoltage protection for one of the incoming supply sources. This device can be installed to the front of the ATyS S, by way of its DIN rail accessory.

# The new ATyS range: intuitive, safe and robust devices

## Changover switches

A complete range of motorised and automatic changeover switches from 125 to 3200 A

To meet the increasing demands of its users, the ATyS range is constantly evolving to offer new functions.

Five models are available to perfectly meet the needs of your application.

### ATyS p special functions:

- Automatic load shedding: Load management based on source power.
- Power and energy monitoring: Measurement of kW, kVar, kVA, kWh, kVarh, kVAh.
- Installation monitoring: Time-stamped event recording, remote access via the Webserver.
- Generator management: Programmed periodic generator starting (Engine Exerciser), on load and off load tests.
- EASY CONFIG configuration software.

## The advantages

### Safe operation

- Permanent indication of product availability (Watchdog relay).
- Positive break indication.
- Mechanical position interlocking.
- Padlocked mode to secure maintenance operations (lockout).
- Secure access to the product configuration.

### Robust integrated solution

#### A single product with all functions:

- Integrated and tested solution: Components factory assembled and wired.
- Greater reliability: Compliance with IEC 60947-6-1, the standard governing changeover switches.

#### Proven SOCOMEC technology:

- Combination of two "back-to-back" PC (load break switch) class switches.
- Switching based on stable positions guaranteeing constant pressure on the contacts at all times.
- SIRCO contact technology used in numerous products for over 40 years.

### Intuitive use

- Manual emergency control: The product can be controlled **quickly and safely** using an emergency handle (motor installed or removed).
- Simple selection of operating mode (Auto/Manual) using an integrated selector.

### Rapid commissioning

- ATyS and ATyS d: No configuration necessary.
- ATyS t and ATyS g: Configuration in just a few minutes using a screwdriver.
- ATyS p: Simplified configuration (EASY CONFIG software and LCD screen on the device).
- ATyS t, g, p: Auto-configuration of the network parameters.

### Easy maintenance

- Self-cleaning sliding contacts.
- Easy replacement of the motor and electronic unit, even on load.

## Improved on load characteristics

### IEC 60947-6-1/GB 14048-11

- AC 31B - up to 3200 A
- AC 32B - up to 2000 A
- AC 33B - up to 1250 A

### IEC 60947-3

- AC 23B - up to 1250 A

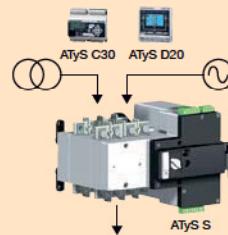

### Extended power supply range

- from 166 to 332 VAC.

## Also available: ATyS S from 40 to 125 A

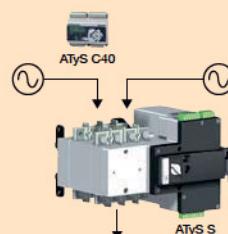

Specially developed for manufacturers of small generators, the ATyS S is a **motorised changeover switch** which enables on load switching between two power supply sources of up to 125 A (< 90 kVA).

# ATyS - ATyS d

**Motorised changeover switches**  
from 125 to 3200 A

Changeover  
switches

new

atys\_d\_001\_a\_1\_cat

## Function

The ATyS and ATyS d are three-phase motorised changeover switches with positive break indication. They enable the on load transfer of two three-phase supplies via remote volt-free contacts, from either an external automatic controller, using pulse logic, or a switch.

They are intended for use in low voltage power systems where interruption of the load supply is acceptable during transfer.

## Advantages

### Watchdog relay to check product availability

ATyS and ATyS d products are equipped with a Watchdog relay which constantly monitors the product, thereby securing your installation.

This relay informs the user of the product's availability, i.e. whether it is operational and ready for source switching.

### Integrated auxiliary contacts

As part of the product monitoring function, the ATyS and ATyS d enable the transmission of information relating to their position.

This is possible thanks to the standard integration of an auxiliary contact for each position.

### Extended power supply range

ATyS and ATyS d products offer greater availability thanks to their extensive power supply range of 208 to 277 VAC ± 20%.

### ATyS d: ATyS with integrated DPS

In addition to the functions offered by the ATyS, the ATyS d incorporates supply redundancy without the need for additional wiring. This is obtained by integrating a double supply (2 independent supplies) directly within the product.

## The solution for

- Non critical buildings.
- OEM.

## Strong points

- Watchdog relay to check product availability
- Integrated auxiliary contacts.
- Extended power supply range.
- ATyS d: ATyS with integrated DPS.

## Conformity to standards

- IEC 60947-6-1
- IEC 60947-3

## Enclosed solution

- Please consult us.

## External automatic controller

- The ATyS and ATyS d are compatible with our ATyS C30 external controllers (for transformer/transformer and transformer/generator applications) and ATyS C40 controllers (for generator/generator applications).

# ATyS *t*

Automatic changeover switches  
from 125 to 3200 A

Changeover  
switches

new

atyS\_t\_001\_a.1

## Function

ATyS *t* is a range of three-phase automatic changeover switches with positive break indication. They incorporate all the functions offered by the ATyS d, as well as functions intended for **transformer/transformer** applications.

In automatic mode they enable the monitoring of, and the on load changeover switching between, two power supply sources, in accordance with the parameters configured via two potentiometers and four DIP switches.

They are intended for use in low voltage power systems where interruption of the load supply is acceptable during transfer.

## Advantages

### Rapid commissioning

ATyS *t* switches offer significant time saving during commissioning (process takes 2 to 3 minutes). Because they have only two potentiometers and four DIP switches, a simple screwdriver is all you need to configure the parameters.

For added simplicity, they also offer an autoconfiguration function which enables automatic adjustment of the rated voltage and frequency.

### Functions adapted to transformer/transformer applications

ATyS *t* products are automatic changeover switches intended specifically for transformer/transformer applications. Their integrated controller has been designed to provide all the functions necessary for these applications, including monitoring the voltage and frequency of both sources, for three-phase and single-phase networks.

# ATyS p

Automatic changeover switches  
from 125 to 3200 A

Changover  
switches

new

atys\_003\_b\_1\_cat

## Function

ATyS p is a range of three-phase automatic changeover switches with positive break indication. They incorporate all the functions offered by the ATyS g, as well as functions designed for **power management** and **enabling communication**.

In automatic mode they enable the monitoring of, and the on load changeover switching between, two power supply sources, in accordance with the parameters configured via pushbuttons and an LCD screen.

They are intended for use in low voltage power systems where interruption of the load supply is acceptable during transfer.

## Advantages

### Recording of events

ATyS p switches enable effective monitoring of your installation thanks to timestamped event recording. Events can be retrieved and read via the communication system.

### Optional communication modules

The ATyS p offers communication functions thanks to the addition of optional modules, such as the RS485 module for Modbus communication or the Ethernet module, which includes a Webserver.

### Configuration software

Software (Easyconfig) is available enabling the ATyS p parameters to be easily configured and the existing configuration to be saved.

### Power measurements

ATyS p products are particularly suited to energy management and monitoring. In addition to their integrated power and energy measurement functions, programmable inputs/outputs can be utilised to control load shedding based on a load level or tariff.

### Generator periodic startup programming (option)

ATyS p switches offer additional functions for maintenance. They include the programmed generator starting function which allows the starting dates and operating times to be configured.

## The solution for

- Applications requiring power management and communication.

## Strong points

- Optional communication modules.
- Recording of events.
- Power measurements.
- Possibility to set periodic genset startup.

## Conformity to standards

- IEC 60947-6-1
- IEC 60947-3

## Enclosed solution

- Please consult us.

## Webserver

The Webserver function comprises HTML pages embedded in the Ethernet communication module.

These pages can be accessed via an internet browser, simply by entering the IP address.

The webserver offers the following functionalities:

- Display of source status and switch position.
- Display of the main measurements.
- Extraction of the latest logged events.
- Display of the product configuration.

## Front panel

1. Slots for optional plug-in modules.
2. Backlit LCD display.
3. Source availability and position indication LEDs.
4. Pushbuttons for programming and mode selection.

## Plug-in modules

ATyS p

### Number of usable modules per product:

A maximum of four modules can be fitted to each ATyS p, however with the installation of either Ethernet communication module only two additional modules can be installed.

Only one pulse output, one analogue output and one communication module can be installed.

- RS485 JBUS/MODBUS® communication**
- RS485 link with JBUS / MODBUS® protocol (speed up to 38400 bauds).
- 2 inputs - 2 outputs**
- Each module has 2 programmable inputs and 2 programmable outputs available.
- Ethernet communication**
- Ethernet link with MODBUS/TCP or JBUS/MODBUS RTU over TCP.
  - Embedded Ethernet Webserver software.
- Ethernet communication with RS485 JBUS/MODBUS gateway**
- Ethernet link with MODBUS/TCP or JBUS/MODBUS RTU over TCP.
  - Connection of 1 to 247 RS485 JBUS/MODBUS slaves.
  - Embedded Ethernet Webserver software.
- Analogue outputs**
- Outputs assignable to:  
3I, In, 3V, 3U, F,  $\pm \Sigma P$ ,  $\pm \Sigma Q$ ,  $\Sigma S$ .
- Pulse outputs**
- 2 configurable pulse outputs (type, weight and duration) on  $\pm$  kWh,  $\pm$  kvarh and kWh.

### Accessories

#### Terminal shrouds

##### Use

IP2X protection against direct contact with terminals or connecting parts.

##### Advantages

Perforations allow remote thermographic inspection without the need to remove the shrouds.

## Copper bar connection kits

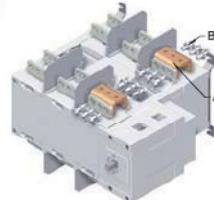

### Use

Enables:

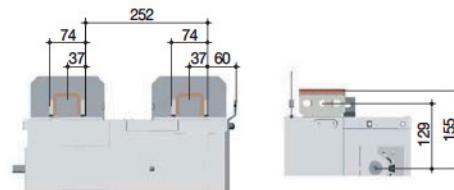

- connection between the two power terminals of the same pole for 2000 to 3200 A ratings (Fig. 1 and Fig 2).
- top or bottom bridging connection (Fig. 3).  
For 3200 A rating, the connection pieces (part A) are delivered bridged from factory.

Bolt sets must be ordered separately.  
The technical notice for these specific accessories can be downloaded from [www.socomec.com](http://www.socomec.com).

### Autotransformer 400/230 VAC

#### Use

For applications without neutral, this autotransformer provides the 230 VAC required to power these ATyS products.

Rating (A)	Reference
125 ... 3200	1599 4064

### DC power supply

#### Use

Allows an ATyS to be supplied from a 12 or 24 VDC source.  
To be positioned as close as possible to the DC power supply source.

Rating (A)	Operating voltage	Reference

### Voltage sensing and power supply kit

#### Use

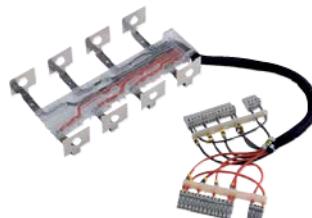

For power supply and voltage measurement (4 wire, three-phase) for the ATyS t, g and p.

Routing of the conductors is controlled, which means that no specific protective device is necessary for these connections.

The kit can be fitted on the top or bottom of the switch.

**Note:** the 3-pole version does not integrate the power supply.

### ATyS DS voltage relay

#### Use

The ATyS DS is a voltage relay for monitoring a single three-phase power supply source.

Upon failure of the power supply source, the voltage relay's fault contact closes.

This output can be utilised, for example, to order the transfer of an ATyS motorised changeover switch.

## Auto/Manual key selector

### Use

Replaces the standard Auto/Manual selector knob with a key selector, providing added security by preventing unauthorised use of product.

This is a factory fitted option which must be requested when ordering the ATyS switch (ATyS, ATyS d, t, g and p). To order this option simply add "-K" after the ATyS reference.

### For example:

9533 4012-K : 4 pole 125 A ATyS d with Auto/Manual key selector. If this option is not required the "K" should not be added to the product reference.

## Remote interfaces

### Use

To display source availability and position indication on the front of a panel.  
Interfaces are powered from the ATyS changeover switch, via the RJ45 connection cable.  
Maximum connection distance: 3 m.

### ATyS D10 - for ATyS d, t and g

To display source availability and position indication on the front panel of an enclosure. Protection degree: IP21.

### ATyS D20 - for ATyS p

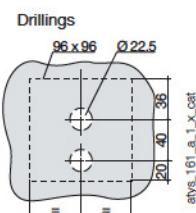

In addition to the functions of the ATyS D10, the D20 displays measurements and enables ATyS p mode control and configuration from the front of a panel. Protection degree: IP21.

### Door mounting

2 holes Ø 22.5. ATyS changeover switch connection via RJ45 cable, not isolated.  
Cable available as an accessory.

Interfaces are powered from the ATyS.

## Connection cable for remote interfaces

### Use

To connect between a remote interface (type D10 or D20) and an ATyS changeover switch (ATyS d, t, g or p).

### Characteristics

RJ45 8 wire straight-through, non isolated cable. Length 3m.

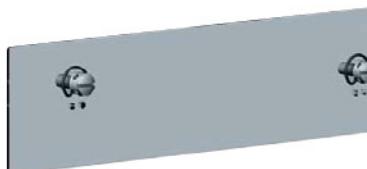

atys.209\_a\_2\_cat

## Sealable cover

### Use - for ATyS t and g

Prevents access to the ATyS t and g configuration potentiometers and DIP switches (seals supplied).

# ATyS C30/C40

## Control relays

### Changeover switches

ATyS C30 controller

ATyS C40 controller

### Function

**ATyS C30/C40** are modular control relays. ATyS C30/C40 allows any type of motorised changeover control: ATyS and ATyS M, contactors, circuit breakers or other motorised switches.

### General characteristics

#### ATyS C30

- ATyS D10 or D20 connection available.
- Inputs for auxiliary contact position information.
- 3U measurement on network 1 and 1U on network 2.
- 2 programmable inputs for the following functions: test on/off load, manual retransfer, priority source selection, automatic inhibit...
- Up to 2 programmable outputs for the following functions: source availability information, load shedding relay and circuit breaker control.
- 1 relay output for generator control.

#### ATyS C40

- Dual genset controller with a redundant genset application cycle (basic cycle).
- 1U measurement on each source - generator 1 & generator 2.
- 3 programmable inputs for the following functions: start/stop transfer cycle, manual retransfer, automatic inhibit...
- 1 programmable output for the following functions : source availability information and circuit breaker control.
- 2 generator control contacts (Gen1 & Gen2).

### Advantages

#### Auxiliary power supply

Two versions of the ATyS C30 are available. One version with an AC supply via the measurement inputs and another with a DC auxiliary supply.

#### Extended compatibility of use

The product is used with Socomec changeover switches, or those using identical technology. It is also compatible with contactor and circuit breaker technologies.

#### Modular device

The ATyS C30 and C40 are modular products (6 modules, 105 mm wide) which can be DIN rail mounted.

### The solution for

- Non critical buildings.

### Strong points

- Auxiliary power supply.
- Modular device.
- Extended compatibility of use.

### Conformity to standards

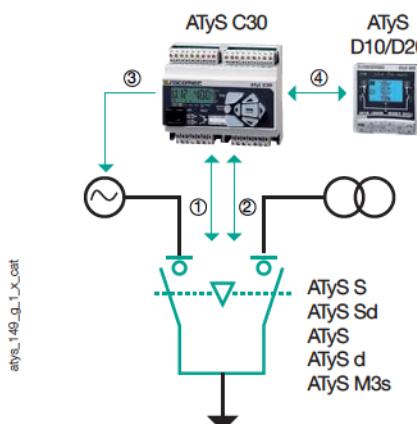

- IEC 61010-1
- IEC 61000-4-x
- IEC 60068-2-x

## Configurations

### ATyS C30:

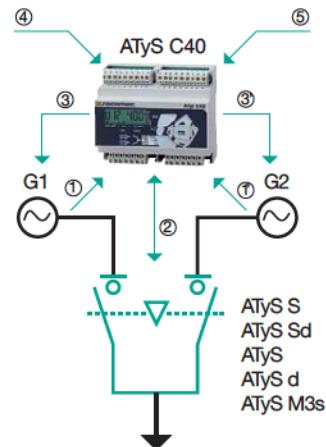

Transformer/transformer and transformer/generator applications

1. Measurement and power supply
2. Control and position information feedback
3. Generator start / stop control
4. ATyS display/interface connection

### ATyS C40:

Generator/generator applications

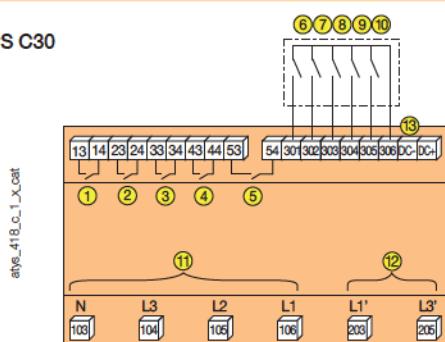

- 1 and 1. 1U measurement for each generator
2. Control and position information feedback
- 3 and 3'. Generator "start/stop" control
4. External "start/stop" command for basic cycle
5. DC power supply
