DIGITAL BUILDING INFRASTRUCTURES

 **legrand**®

THE NEW DX³ OFFER

Legrand offers you leading-edge technical features with its new DX³ range of modular circuit breakers.

This range, up to 125 A, is suitable for all residential, commercial and industrial applications which require high performance, selectivity and back-up combination of devices. In this document, discover the innovations of this new range which will enable you to build more reliable, higher performance and more economical distribution boards.

PROTECTION/BREAKING

2-3

A clear, comprehensive offer for all types of application

4-5

Performance that meets your requirements

6-7

Clear identification of each circuit

8-9

Impeccable quality

LEGRAND, A CLEAR, COMPREHENSIVE OFFER FOR ALL TYPES OF APPLICATION

The new DX³ circuit breakers

can be integrated in a wide range of products, providing exceptional technical and economic performance levels

The variety of functions and range of characteristics offered will enable you to equip all your distribution boards. The very high levels of coordination between the various ranges of DX³ modular circuit breakers or between DX³ modular circuit breakers and DPX³ MCCBs enable the cost of the installation to be optimised.

MEASUREMENT

PROTECTION/BREAKING

CONTROL

All functions on DIN rail

Each breaking capacity has its own power solution

Perfect complementarity for your distribution boards up to 6300 A and 100 kA breaking capacity.

PERFORMANCE THAT MEETS YOUR REQUIREMENTS

The DX³ range is designed to meet the efficiency, safety and compliance requirements with which new electrical installations must comply.

Nominal current, breaking capacity, number of poles, tripping curve, discrimination: the electrical characteristics of the new DX³ circuit breakers have been designed to meet the needs of all types of installations, from residential buildings to the largest industrial sites, including commercial buildings of all sizes.

Compact:
10 to 32 A 4-pole DX³ RCBO only 4 modules, protected neutral.

DX³ performance

A comprehensive, uniform range up to 125 A nominal current and 50 kA breaking capacity in a compact unit (1 or 1.5 modules/pole).

DX³ circuit breakers are limitation class 3: they limit the short-circuit power in the cables and can prolong the installation's life by avoiding damage to the cables resulting from the stresses caused by the power flowing through them. The products never work at the "limit" of their capacity.

The information in the table applies to 1P, 3P and 4P circuit breakers. For further information on the number of modules per pole, please refer to the catalogue pages.

■ 1 module per pole ■ 1.5 module per pole

THE XL PRO CALCUL AND XL PRO³ software include the whole DX³ range for building perfect distribution boards.

The tripping characteristics are calculated and adjusted to ensure correct discrimination between the different protection levels in order to improve ease of use.

CONTINUITY OF SERVICE: OPTIMUM DISCRIMINATION

The excellent discrimination between DX³ circuit breakers and with DPX or DPX³ MCCBs ensures optimum continuity of service for your installations.

CLEAR IDENTIFICATION OF EACH CIRCUIT

At the head of distribution boards,
at the head of rows
or to protect outgoing lines up to 125 A.
There is always a DX³ solution

Quick identification of devices and circuits is a guarantee of efficiency not only for installation but also for operation and maintenance. Legrand has always taken great care with the marking and ease of identification of its circuit breakers.

The DX³ range includes new enhancements so that your distribution boards are even easier to use.

Technical labelling area

Innovative label-holder:

- Improved opening
- Enhanced dust protection
- Label remains firmly in place during transport

Identification

Dual identification of the breaking capacity and clear marking for easier maintenance

Black handle: circuit breakers
Grey handle: switches

Breaking capacity

16 kA	
25 kA	
36 kA	
50 kA	

Curve

Limitation class 3 (on concerned ratings and breaking capacities)

Rating

Breaking capacity according to IEC 60898-1

STATE OF THE CIRCUIT BREAKER

Can be identified quickly via the colour marking on the handle:

I-On/red
O-Off/green

DX³ IMPECCABLE QUALITY

Legrand pays particular attention to how these devices perform: each of them is set and checked individually on the production lines

Isolating switches, RCDs, circuit breakers, RCBOs, add-on modules, control and signalling auxiliaries: the guarantee of finding the function you need with a uniform appearance and optimised dimensions.

CERTIFICATION OF LEGRAND'S FACTORIES:

- ISO 9001 for quality
- ISO 14001 for environmental protection

DX³ PRODUCTS ARE CERTIFIED IN ACCORDANCE WITH INTERNATIONAL PRODUCT STANDARDS.

Approvals, such as VDE, which are universally recognised for the rigour of their requirements, are renewed annually.

All DX³
circuit breakers can be used with an
add-on module (see page 10).

The DX³ control and signalling auxiliaries are common to all the protection devices irrespective of their size (1 or 1.5 modules per pole) (see page 12).

COPYTRACER, THE FIGHT AGAINST COUNTERFEITING

Copytracer is a unique registration number that is marked on some of our products. The number is stored in a database.

Go to the website: www.legrand-copytracer.com

PROTECTION TAILORED TO YOUR REQUIREMENTS

With the
DX³ add-on modules

The new DX³ add-on modules have a wide range of features to meet the most stringent requirements for the protection of people. Like the new DX³ circuit breakers, they offer high performance levels and incorporate innovative solutions for installation and operation.

		FIXED				ADJUSTABLE	
Sensitivity		30 mA		300 mA		300-500-1000 mA	
Time delay		Instantaneous		Instantaneous		0-60-150 ms	
Max. current		63 A	125 A	63 A	125 A	63 A	125 A
AC type	4P						
	2P	●	●			●	●
	3P	●	●	●		●	●
	4P	●	●	●		●	●

A single mounting principle
for all DX³ add-on modules

It has never been so quick and safe to fit an add-on module. The exclusive Legrand system, common to the whole DX³ range, makes the assembly extremely strong and provides guaranteed safety.

Maximum continuity of service

DX³ adjustable add-on modules can provide discrimination up to 3 levels by adjusting their sensitivity. They enable those parts of the installation that are not affected by a fault to remain operational, while ensuring total safety of people.

4P - 125 A ADD-ON MODULE
adjustable version

Easy to access settings on the front panel
with sealable transparent cover

FIT THE CIRCUIT BREAKER
and the add-on module

LOCK THE COMBINATION TOGETHER

TIGHTEN THE TERMINALS
and fit the terminal shield

PERFECT CONTROL OF YOUR INSTALLATION

The DX³ range has a selection of electrical auxiliaries for monitoring and controlling circuits remotely

Auxiliary contacts and fault signal contacts, shunt trips, undervoltage releases, motorised controls and automatic reclosers

THE AUXILIARIES FIT FIRMLY WITHOUT the need for any tools and ensure the whole assembly is robust

THE ACCESSIBILITY OF THE TERMINALS and the visibility of the screw heads make the installer's work easier

DX³ motorised controls can be used with 1 module per pole devices (circuit breakers, RCBs and RCCBs) just as easily as auxiliaries.

OPTIMISED SPACE IN THE DISTRIBUTION BOARD

Legrand motorised controls are the most compact on the market: 1 module wide.

They save a great deal of space inside the distribution board.

EASY, SAFE CONNECTION

Safety is prioritised with the innovative features of the DX³ products

The quality and hold of the connections are vital for the safety of distribution boards. This is why Legrand, with its wealth of experience and expertise, has broken new ground again with terminals with a loosening compensation system and retractable insulating shields.

1 MODULE/POLE
Terminal capacity:
 $I_n \leq 63 A \rightarrow 50 mm^2$
 $I_n \geq 80 A \rightarrow 70 mm^2$

1,5 MODULES/POLE
Terminal capacity:
 $I_n \leq 63 A \rightarrow 50 mm^2$
 $I_n \geq 80 A \rightarrow 70 mm^2$

WIRE GUIDE FLAP ensures the wire is in the correct position

RISING CLAMP TERMINALS ensure a high quality, durable connection

RELIABLE CONNECTIONS Compensation for the effect of loosening to ensure excellent hold over time and consistent contact ($I_{n} \geq 80 \text{ A}$)

1
module/pole

Clamping screw for flat or pozidrive screwdriver. Tightening torques higher than those recommended by the standard

1,5
modules/pole

The use of an Allen key makes it easier to tighten to the required torque ($I_{n} \geq 80 \text{ A}$)

RETRACTABLE INSULATING SHIELDS

With the integrated retractable insulating shields, no additional accessories are needed to isolate the connections on all breaking capacities and high ratings of the 1.5 modules/pole ($I_{n} \leq 63 \text{ A}$) circuit breakers.

CHOOSE YOUR DISTRIBUTION

A wide range of distribution devices is available for your modular rows

From the simple supply busbar to the HX³ 125 A plug-in distribution block, whether they have conventional screw connections or more innovative automatic terminal connections, or plug in directly, Legrand quality is always there.

STANDARD DISTRIBUTION Supply busbars

DX³ 1 module/pole devices up to 63 A can be connected to supply busbars via the top or the bottom.

Four-pole distribution

For three-phase horizontal distribution in a single action.

STANDARD DISTRIBUTION Modular distribution blocks

The 40 to 250 A modular distribution blocks are totally universal, making them suitable for all types of distribution board.

OPTIMISED DISTRIBUTION VX³ 63 and 125 A, vertical distribution blocks with automatic terminals

- Significant space saving due to their vertical installation beside the rows
- Time saving as there is less wiring with the IP 2x automatic terminals for flexible or rigid wires.

Mounting in Legrand enclosures:
Plexo³, XL³125, 160, 3 to 6 rows

SUPPLY BUSBARS, AN IDEAL ADDITION

In addition to 4-pole vertical distribution blocks with automatic terminals, supply busbars power the devices in each row via the "head of row" protection device.

CHOOSE YOUR DISTRIBUTION (continued)

Legrand optimised distribution
has been designed for maximum safety and for ease of installation and maintenance of distribution boards

Wiring and tedious tightening operations are minimised, and the risks of poor contact and short-circuits are reduced while mounting time is optimised.

OPTIMISED DISTRIBUTION HX³ 125 A horizontal distribution blocks with automatic terminals

Horizontal 4-pole distribution for XL³ 160 to 4000 enclosures:

- Freedom to mix 1P, 1P+N, 2P, 3P and 4P devices on the same row
- Space saving: installed between the rows
- Time saving: less wiring, IP 2x automatic terminals for flexible or rigid wires

Fixing lugs for mounting on rails. Mounting also possible on solid plate

DISTRIBUTION BLOCK
SUPPLY VIA THE
POWER SUPPLY MODULE PROVIDED

CONNECTION MODULES
Set of 4 connection modules (L1, L2, L3, N)
for 1 module/pole devices

OPTIMISED DISTRIBUTION HX³ 125 A

horizontal distribution
blocks with plug-in
connection

Horizontal 4-pole distribution for XL³
160 to 4000 enclosures:

- Optimised design:
freedom to mix 1P, 1P+N, 2P,
3P and 4P devices on the same row
- Optimised installation: automatic
connection with no wiring or clamping
- Safe connection and disconnection of
devices, even when the distribution
block is powered-up (due to the IP xxB
insulation of the distribution block and
the integral connection modules in
the devices).

DISTRIBUTION
BLOCK SUPPLY
VIA THE MAIN
DEVICE

EASY CONNECTION

Circuit breakers with plug-in terminals
are fixed onto the distribution block
with no need for any tool. The phase
to be connected is determined by the
choice of connector. The distribution
block can be supplied via the power
supply module provided or via the
head of row device.

EASY OPERATION AND MAINTENANCE

When designing
the DX³ range,
Legrand did not
forget about
users and
maintenance
engineers

As well as the already well-known functions such as the double clip which enables maintenance to be carried out on the module, new features such as the labelling area, automatic connection tap-off terminals and status indicators have been added to make day-to-day use of distribution boards even easier.

EASY TAP-OFF CONNECTION FROM 80 A
The IP 2x automatic tap-off terminals can be used to connect an auxiliary circuit or a measuring device safely

INCREASED SAFETY
The DX³ range guarantees IP2x protection. There is no risk of contact with live parts, even when the faceplate is open.

LOCKING IN OPEN POSITION
for 1.5 module per pole devices using a single Colring cable tie

THE DOUBLE CLIP
enables a device to be replaced without disconnecting the whole row

MORE COMFORTABLE BUILDINGS AND ENERGY SAVINGS

The Legrand modular control and monitoring devices are a perfect addition to the range of DX³ protection devices

With the same design, they integrate perfectly in your distribution boards. Power contactors, pulse operated latching relays, pushbuttons, indicators, timers, programmers, etc. With the selection of functions available it is simple to improve the safety, efficiency and comfort of installations and meet energy requirements.

SUPPLY BUSBAR INSERTION

There is a position on the top of the control devices for inserting the supply busbar

LIGHT SENSITIVE SWITCH
to switch lighting on automatically when the natural light decreases

16 A TO 63 A LEGRAND POWER CONTACTORS are available with 24 VAC or 230 VAC coil

TIMER
to switch off of lighting automatically after an adjustable period of 0.5 s to 10 min

- 1 to 4 x 16 A outputs
- 24-hour, 7-day or annual programming
- Programming direct or from a PC with a transfer key

ENERGY SAVINGS WITH TIMERS

In order to optimise power consumption, Legrand electronic timers can be used to assign operating periods, for example for heating or lighting.

MEASUREMENT AT THE HEART OF ENERGY EFFICIENCY

A project to optimise
quality and 
energy efficiency must
include measurement

Measurement upstream, to identify the critical points and ensure optimum targeting of the actions to be taken. Downstream to monitor the effects and control any drift. Legrand EMDX³ measurement control units and electricity meters will naturally have a place in distribution boards.

EMDX³ measurement control units

All the essential parameters of the installation on DIN rail or on the door:

- Dual tariff metering
- Active and reactive energy
- Operating time
- Power factor
- Harmonic distortion
- Programmable alarms

EMDX³ UNIT ON DIN RAIL

EMDX³ UNIT ON DOOR
EMDX³ units on doors provide a large size display and their capacity can be increased with extension modules.

PEP eco PASS PORT®

ECO-DESIGN
A VOLUNTARY APPROACH

The Legrand group has been taking environmental problems into account since 2001. This approach is based on international standards for the objective measurement of the environmental impacts of products in terms of both consumption of resources and pollution. Legrand publishes these reports in the form of PEP (Product Environmental Profile) sheets.

Remote supervision and viewing

With the Legrand communication interfaces (RS 485, IP), supervision software and Web servers, measurements can be centralised and displayed remotely on a PC, tablet or smartphone.

EMDX³ electricity meter on DIN rail

EMDX³ meters installed in secondary distribution boards can be used to monitor consumption per building, per floor and per application.

RCDs DX³-ID

technical characteristics

■ DX³-ID - RCDs (residual current devices)

Connection cross-section

RCDs	Cable (mm ²)	
	rigid	flexible
Connection at top and bottom	50	35

■ AC type - Standard applications

AC type RCDs detect AC residual currents

In the majority of cases (standard applications), they are used for AC current detection at 50/60 Hz

■ A type - Specific applications: dedicated lines

In addition to the characteristics of AC type RCDs, A type RCDs also detect DC residual currents

They are used whenever fault currents are not sinusoidal

They are particularly suitable for the following specific applications (hobs, washing machines...) or materials that may produce DC fault currents, speed drives with frequency inverters, etc.

■ Hpi type - Special applications

Type Hpi RCDs are devices which offer additional immunity to unwanted tripping which significantly exceeds the level required by the standard

They are also able to detect AC and DC residual currents (A type)

Operation between - 25 °C and + 40 °C

They are used in special applications where:

- Loss of information is potentially damaging, e.g. power supply lines for computer equipment (banks, equipment on military bases, flight reservation centres, etc.)
 - Loss of operation is potentially damaging (automated machinery, medical equipment, freezer cable, etc.)
- They are also used:
- On sites where there is an increased risk of lightning strikes
 - On sites where cables are subject to high levels of interference (use of fluorescents, etc.)
 - On sites where very long cables are used

RCBOs DX³ 6000 - 10 kA

residual current circuit breakers from 3 A to 63 A - AC, A and Hpi types (continued)

4 111 49

4 111 92

4 112 41

Dimensions [see e-catalogue](#)
Technical characteristics p. 42

Breaking capacity:

[6000] - IEC 61009-1 - 10 kA / IEC 60947-2 for single pole + neutral, 2 and 4-pole

- AC type : detect AC component faults
- A type : detect AC and DC component faults
- Hpi type (High immunity) : detect AC and DC component faults

Enhanced immunity to unwanted tripping in disturbed environments

Can be equipped with DX³ auxiliaries and accessories (p. 40)

AUXILIARIES AND REMOTE CONTROL

Common auxiliaries and motorised controls for DX³ MCBs, RCBOs and RCDs

DISCOVER THE RANGES

- Perfect fitting on protection devices
- Easy to access and visible terminals
- Allow insertion of supply busbars

STOP&GO automatic resetting for DX³

Operating principle

Temporarily electrical disturbances and other external events can cause unwanted tripping of different devices protecting electrical installation

STOP&GO verifies automatically the state of the installation, before resetting and launches a visual and audible alarm signal in case of permanent fault detection (short-circuit or residual current)

After verifying the state of the installation, STOP&GO automatic resets the associated protection device in order to immediately re-establish power supply and avoid unwanted consequences

STOP&GO does not protect the installation against lightning strikes
For an efficient protection against lightning, use voltage surge protectors

The Autotest version is specially suitable for installations equipped with residual current protection devices (RCD's and RCBOs)

STOP&GO periodically does an automatic test of the functioning of residual current protection devices. The manual test is no longer needed

Mains fault due to temporarily electrical disturbances
Electrical devices are not powered anymore

STOP&GO automatic resets the associated protection device in order to immediately re-establish power supply

Performance of MCBs and auxiliaries

■ Technical characteristics of auxiliaries

Max. connection cross-section: 2.5 mm²
Operating temperature: - 25°C to + 70°C

Shunt trips

Equipped with a signalling contact which indicates tripping of the shunt trip and automatically breaks the coil.
Min. and max. voltage: 0.7 to 1.1 Un

Tripping time: less than 20 ms

Power consumption: at 1.1 x 48 V = 121 VA
at 1.1 x 415 V = 127 VA

Impedance: 12 to 48 V = 23 Ω
110 to 415 V = 1640 Ω

Consumption	Umin.	Umax.
12 to 48 V	522 mA	2610 mA
110 to 415 V	69 mA	259 mA

Undervoltage releases

Pull-in voltage ≥ 0.55 Un

Tripping time: 100 to 400 ms ± 10% (adjustable)

Power consumption: 24 V \sim and = : 0.1 VA

48 V \sim and = : 0.2 VA

230 V \sim : 1 VA

Stand-alone releases for N/C push-buttons

Min. and max. operating voltage: 196 to 250 V \sim

Power consumption: 1.4 VA

Signalling auxiliaries

Umin.: 24 V \sim / = and Imin.: 5 mA

Performance of add-on modules

AC type - Standard applications

Detection of 50-60 Hz AC residual currents

A type - Specific applications: dedicated lines

In addition to the characteristics of AC type add-on modules, A type add-on modules also detect residual currents with DC components. They are used whenever the fault currents are not sinusoidal. They are particularly suitable for the following dedicated line applications:

- On circuits where class 1 equipment may produce fault currents with DC components, such as variable speed drives with frequency inverter, etc.

Hpi type - Special applications

Hpi add-on modules, with additional immunity to false tripping, which is much higher than the level required by the standard, detect residual currents with AC and DC components (A type), operate between - 25°C and + 40°C, and are used in the following special cases:

- When loss of data would be detrimental, such as computer equipment power supply lines (banks, military instrumentation, airline reservation centres, etc.)
- When loss of operation would be detrimental (automated machines, medical instrumentation, freezer lines, etc.)
- In places where there is a high risk of lightning strikes
- On sites with lines subject to considerable interference (use of fluorescent lights, etc.)
- On sites with very long lines

Special case of continuity of service

In certain locations where no staff are present and in which continuity of service is particularly important, false tripping of MCBs is not permitted (isolated telephone/TV or radio substations, pumping stations, etc.)
Combining an Hpi RCBO with a motorised control and a STOP & GO recloser provides optimum continuity of service

Average residual current performance curves

Residual current breaking capacity of DX³ add-on modules

$I_{\Delta m}$ according to EN 61009-1
AC, A and Hpi add-on modules

DX ³ add-on modules used with an MCB	$I_{\Delta m}$
DX ³ (1 mod./pole) 25 kA ≤ 25 A (B, C, Z curves) 25 kA ≤ 10 A (D, MA curves)	6000 A
DX ³ (1.5 mod./pole) 10000 16 kA (80 to 125 A) 25 kA ≥ 32 A (B, C, Z curves) 25 kA ≥ 12.5 A (D, MA curves) 36 kA 50 kA	30000 A

Protection of DC circuits

■ Protection of DC circuits

DX³ 6000 and DX³ 10000 MCBs (1P/2P/3P/4P - In ≤ 63 A) designed for use in 230/400 V_{AC} supplies, can also be used in DC circuits. In this case, the following deratings and precautions must be taken into account:

1 - Protection against short-circuits

Max. magnetic tripping threshold: multiplied by 1.4

Example: For a C curve MCB for which the AC tripping threshold is between 5 and 10 In, the DC tripping threshold will be between 7 and 14 In

2 - Protection against overloads

The time/current thermal tripping curve is the same as for AC

3 - Operating voltage

Max. operating voltage: 80 V per pole (60 V for single-pole + N MCBs). For voltages higher than this value, several poles must be wired in series:

Example: for a 110 V voltage, use a 2-pole MCB and connect the 2 poles in series

4 - Breaking capacity

4000 A for a single pole MCB at max. voltage (80 V_{DC} per pole)

For other voltages, the breaking capacities are as follows:

DX ³ 6000		voltage	single-pole	2P	3P	4P
Acc. to	IEC 60947.2	Icu	≤ 48 V	6 kA	6 kA	
		Icu	110 V		6 kA	6 kA
			230 V			10 kA
Acc. to	IEC 60947.2	Ics ⁽¹⁾	≤ 48 V	100 %	100 %	
		Ics ⁽¹⁾	110 V		100 %	100 %
			230 V			100 %

DX ³ 10000		voltage	single-pole	2P	3P	4P
Acc. to	IEC 60947.2	Icu	≤ 48 V	10 kA	10 kA	
		Icu	110 V		10 kA	10 kA
			230 V			15 kA
Acc. to	IEC 60947.2	Ics ⁽¹⁾	≤ 48 V	100 %	100 %	
		Ics ⁽¹⁾	110 V		100 %	100 %
			230 V			100 %

1: As a % of Icu

5 - Distribution of breaking poles

To choose the MCB and determine the pole distribution necessary for breaking on each of the polarities, it is necessary to know how the installation is earthed.

• Supply with one polarity earthed:

Place all the poles necessary for breaking on the other polarity. If isolation is required, an additional pole must be added on the earthed polarity.

1: Only if isolation required

Example: circuit earthed via the negative polarity / U = 110 V_{DC} / Isc = 10 kA / In = 32 A

Protect the positive polarity using an MCB capable of breaking 10 kA at 110 V (DX³ 10000 2P 32 A with 2 poles on the positive polarity). For isolation, use a DX³ 10000 3P 32 A with 2 poles on the positive polarity and one pole on the negative polarity.

DX ³ 10000	voltage	single-pole	2P	3P	4P	
Acc. to	IEC 60947.2	Icu	≤ 48 V	10 kA	10 kA	
		Icu	110 V		10 kA	10 kA
			230 V			15 kA

• Network earthed via a middle point:

Place on each polarity the number of poles necessary for max. Isc breaking at half voltage

1: MCB (U/2-Isc max.)

Example: circuit earthed via a middle point / U = 230 V_{DC} / Isc = 6 kA / In = 10 A

Protect each polarity using an MCB capable of breaking 6 kA at half voltage, i.e. 115 V (DX³ 6000 4P 10 A with 2 poles on each polarity)

DX ³ 6000	voltage	single-pole	2P	3P	4P	
Acc. to	IEC 60947.2	Icu	≤ 48 V	6 kA	6 kA	
		Icu	110 V		6 kA	6 kA
			230 V			10 kA

• Isolated earth supply:

Distribute the poles necessary for breaking over the 2 polarities to provide protection in the event of a double earth fault (particularly if there are a number of circuits in parallel)

1: MCB (U-Isc max.)

Example: isolated earth circuit / U = 48 V_{DC} / Isc = 4.5 kA / In = 40 A Protect the installation with an MCB capable of breaking 4.5 kA at 48 V and protect each polarity (DX³ 6000 MCB 2P 40 A with one pole on each polarity)

DX ³ 6000	voltage	single-pole	2P	3P	4P	
Acc. to	IEC 60947.2	Icu	≤ 48 V	6 kA	6 kA	
		Icu	110 V		6 kA	6 kA
			230 V			10 kA

Power contactors CX³

Technical characteristics

- Rated impulse withstand voltage (Uimp): 4 kV
- Mechanical endurance (no. of operating cycles): 10⁶ cycles
- Operating temperatures: - 25 °C to + 40 °C
- Storage temperatures: - 40 °C to + 70 °C

Contactor protection against short circuits according to standard EN 61095, conditional short-circuit current:

- I_q = 6 kA for 16 to 25 A contactors
- I_q = 3 kA for 40 to 63 A contactors

Circuit breaker or gG fuse rated:

- ≤ 16 A for 16 A rating ≤ 40 A for 40 A rating
- ≤ 25 A for 25 A rating ≤ 63 A for 63 A rating

Consumption of a contactor control coil

Surface mounting pulse operated latching relays					
		10 A - 230 V~ - 50/60 Hz Suitable for new installations or retrofitting of existing ones Compatible with electronic ballasts and fluocompact lamps Mounting on plate or in flush-mounting boxes Ø67 mm Equipped with automatic terminals for flexible or rigid wires (max. 2.5 mm) Power : min. 7 W / max. 2300 W IP 20 - IK 04 Dimensions: 49 x 46 x 26 mm Maximum current when used with illuminated push-buttons : 50 mA			
10	0 491 20	Noiseless Single pole			
10	0 491 21	Single pole with timer Enables energy savings by switching off lighting after a specified period Time delay adjustment from 1 to 60 min. Switch-off pre-warning function (can be disabled)			
Pack	Cat.Nos	Signalling auxiliary			
		Fitted on left-hand side of latching relay (equipped or not with control auxiliary) Maximum 2 auxiliaries per latching relay Used to signal the status of the contacts on the associated product			
1	4 124 29	I max. 5 A	Voltage 250 V~	Contact N/C + N/O	Number of modules 0.5
Pack	Cat.Nos	Control auxiliary			
		Fitted on left-hand side of latching relay Maximum 1 control auxiliary per latching relay Compatible with signalling auxiliary Cat.No 4 124 29			
Auxiliary device for centralized control			For a centralized control of different latching relays from one single point		
1	4 124 33	For latching relays 24 V~ to 48 V~			Number of modules 0.5
1	4 124 34	For latching relays 230 V~			0.5
Pack	Cat.Nos	Auxiliary device for general centralized control			
		For simultaneous control of different groups of latching relays, already fitted with auxiliary device for centralised control 230 V~ Cat.No 4 124 34			1
1	4 124 36				
Pack	Cat.Nos	Auxiliary device for maintained contact			
		Allows the control of a latching relay via one maintained contact (i.e. time switches)			0.5
1	4 124 37				
Pack	Cat.Nos	Compensator module			
		Used to control 230 V~ - 50 Hz pulse operated latching relays via illuminated push-buttons without malfunctions Connects to the terminals of the pulse operated latching relay coil Compensation: - 1 compensator module for a total consumption of 3 to 6 mA (example: 6 to 11 illuminated push-buttons consuming 0.55 mA each) - 2 compensators modules for a total consumption of 6 to 9 mA (example: 12 to 17 illuminated push-buttons with consuming 0.5 mA each)			
1	4 124 39	Impedance compensator for 230 V~ pulse operated latching relays			Number of modules 1

Pulse operated latching relays

Schemas

Signalling with auxiliary Cat.No 4 124 29

Centralized control at one point using auxiliary devices Cat.Nos 4 124 34 and 4 124 36

Use only non illuminated push-buttons

Control via maintained contact using auxiliary device Cat.No 4 124 37 and time switch

Dimensions [see e-catalogue](#)

Can be used to switch a lighting circuit "ON" and "OFF" based on light conditions (nightfall, daybreak)

Supplied with photoelectric cell housed in Plexo weatherproof box

Power supply: 230 V~ - 50/60 Hz

Pack	Cat.Nos	Standard
1	4 126 23	<p> Output 16 A - 250 V~ - $\mu \cos \varphi = 1$ 2000 W incandescent 2000 W series compensated fluorescent 1000 W parallel compensated fluorescent 70 μF 1000 W energy-saving bulb 2000 W halogen bulb + ferromagnetic transformer 2000 W halogen bulb + electronic transformer Automatic timer response Adjustable from 1 to 100 000 lux Number of modules: 1 Supplied with photoelectric cell Cat.No. 4 128 58</p>
1	4 128 58	Replacement photoelectric cell for use with standard light sensitive switch Cat.No. 4 126 23 - IP 55 - IK07
1	0 037 21	<p>Programmable with weekly time switch</p> <p> Output 10 A - 250 V~ - $\mu \cos \varphi = 1$ 1000 W incandescent 2000 VA fluo serie compensated Timer response: 60 sec Adjustable from 2 to 60000 lux 8 possible programmes (off periods during the night)</p>

Numbers of modules
2

Light sensitive switches

Standard light sensitive switch (Cat.No 4 126 23)

Switch "ON" and "OFF" defined by a light level threshold

Programmable light sensitive switch (Cat.No 0 037 21)

Controls lighting according to the time and light level

Minimum switching interval: 1 minute

Working reserve: 100 hrs

Manual switch: override/programme/stop

Automatic changeover to summer/winter time

Temporary override with automatic return to programme

EMDX³ electrical energy meters

└ rail mounting

0 046 70

0 046 74

Technical characteristics p. 61

Measure the electricity consumed by a single-phase or three-phase circuit downstream of the electricity distribution metering
Display electricity consumption in kWh, as well as other values such as current, active energy, reactive energy and power (depending on the catalogue number)
Conform to standards IEC 62053-21/23, IEC 62052-11 and IEC 61010-1
MID compliance ensures accuracy of the metering with a view to recharging for the electricity used

Pack	Cat.Nos		Single-phase meters
1	Non-MID 0 046 70	MID compliant 0 046 78	Direct connection 32 A - 1 module Pulse output 36 A - 2 modules Pulse output 63 A - 2 modules Pulse output 63 A - 2 modules RS 485 output

Reference frequency: 50-60 Hz
Pulse output: 1 pulse/10 Wh
(Cat.No 046 70: 2 pulse/Wh)

Three-phase meters Cat.Nos 0 046 73/74/80/82/83/84/85/86

LCD display: 8 digits
Resolution: 0.01 kWh⁽¹⁾
Maximum indication: 99999.99 kWh⁽¹⁾
Metrological LED: 0.1 Wh/pulse or 1 Wh/pulse
Active energy accuracy (EN 62053-21): class 1
Reactive energy accuracy (EN 62053-23): class 2
Reference voltage Un:
- Single-phase: 230-240 V
- Three-phase: 230(400)-240(415) V
Operating limit range (EN 62053-21, EN 62053-23):
- Single-phase: 110 to 254 V
- Three-phase: 110(190) to 254(440) V
Pulse output: 1 pulse/10 Wh
